

ANUSHA PRATHAPANI

Data Visualization & Analytics | Python • SQL • Excel • Tableau

prathapanianusha25@email.com • +91-8801706555 • [\[LinkedIn Profile\]](#) • [\[GitHub Profile\]](#) • [\[Kaggle\]](#)

SUMMARY

Results-driven Data Visualization & Analytics professional skilled in translating raw data into compelling visual stories that enable informed decision-making. Experienced in Python (Pandas, NumPy, Matplotlib, Seaborn), SQL, Tableau, and Excel across the full analytics pipeline, from data wrangling and EDA to dashboard creation and reporting. Passionate about leveraging data to uncover patterns, optimize processes, and drive measurable business outcomes.

EDUCATION

2024 - 2028	Bachelor of Technology - Computer Science & Artificial Intelligence Newton School of Technology, Rishihood University, CGPA: 6.83/10.0	Haryana, India
2022 - 2023	Intermediate (Class XII) Nano Junior College, Percentage: 94.9%	Telangana, India
2021 - 2022	Matriculation (Class X) Narayana Olympiad High School, CGPA: 10.0/10.0	Telangana, India

PROJECTS

Feb 2026	Blinkit Sales & Operations Analytics [GitHub] (Google Sheets EDA Dashboard Feb 2026) - Analysed 8,523 transaction records across 10 outlet types to identify revenue drivers for India's leading quick-commerce platform, using Google Sheets for end-to-end cleaning, transformation, and pivot analysis. - Identified Fruits & Vegetables and Snack Foods as top revenue categories (₹180K+ each) and Tier 3 Supermarket Type 1 outlets as the highest-performing segment (~65% total sales share), delivering 6 data-backed expansion recommendations. - Engineered 5 derived features (Outlet Age, Sales Tier, Category Count, Avg Sales per Outlet) and built 3 interactive dashboards targeting C-suite, category managers, and outlet operations teams with dynamic filter slicers.
Apr 2026	Global Retail Analytics: Revenue, Customer Behaviour & Operations [GitHub] (Python Pandas Tableau Apr 2026) - Built a 4-stage Python ETL pipeline (extraction, cleaning, EDA, statistical analysis) on a 302,010-row global retail dataset spanning 5 countries and 5 product categories, reducing raw data to 293,468 validated records with zero nulls and zero duplicates. - Conducted 11 statistical tests (Pearson, Spearman, Welch's t-test, Kruskal-Wallis, Chi-square, ANOVA) with effect size interpretation; identified Premium customers as the highest-satisfaction segment (56.2%) and quantified a \$64.9M pending order pipeline risk. - Engineered 8 features (High-Value Flag, Satisfied Flag, Revenue per Purchase, Quarter, etc.) and designed 3 interactive Tableau dashboards covering sales performance, customer segmentation, and operational efficiency, generating recommendations with an estimated \$74–77M revenue impact.

SKILLS

Programming: Python

Databases: SQL (MySQL), NoSQL (MongoDB), Query Optimization, Data Extraction

Analytics: Pandas, NumPy, Exploratory Data Analysis (EDA), Statistical Analysis, Data Wrangling

Tools: Git, GitHub, Jupyter Notebook, Excel

Visualization: Matplotlib, Seaborn, Plotly, Power BI, Tableau, Excel Dashboards & Pivot Tables
