SUMMARY

Detail-oriented Data Analytics professional currently pursuing B.Tech in Data Science at Newton School of Technology. Experienced in end-to-end analytics workflows data extraction, cleaning, exploratory data analysis (EDA), statistical modelling, and interactive dashboard creation using Python (Pandas, NumPy, Matplotlib, Seaborn), SQL, Tableau, Power BI, and Excel.

TECHNICAL SKILLS

Analytics: Pandas, NumPy, Exploratory Data Analysis (EDA), Statistical Analysis, Data Wrangling, Data Cleaning

Visualization: Matplotlib, Seaborn, Tableau, Power BI, Looker Studio, Excel Dashboards & Pivot Tables

Databases: SQL (MySQL, PostgreSQL), NoSQL (MongoDB)

Languages: Python, SQL

Tools: Git, GitHub, Jupyter Notebook, Excel, Google Sheets, Agile / Scrum

PROJECTS

Kerala Residential Electricity Anomaly Detection

Feb 2026

Tools: Python, Excel, Looker Studio / Role: Data Cleaning & EDA

- Performed end-to-end data cleaning and preprocessing on 10,800 residential electricity records, standardizing 18+ columns and handling missing values.
- Conducted in-depth EDA to uncover consumption trends, identified 1,930 abnormal usage events out of 4,739 total anomalies flagged across the dataset.
- Uncovered that independent houses had the highest deviation (5.99%) and temperatures above 30°C correlated with peak anomalies (6.37% deviation).
- Developed cluster-level segmentation and pivot-based summaries enabling electricity authorities to prioritize high-risk consumer groups for targeted inspections and proactive fraud prevention.

Global Retail Analytics — Revenue, Customer Behavior & Operations

April 2026

Tools: Python, Pandas, Tableau, Jupyter Notebook / Role: Visualization Lead

- Analyzed 302,010 retail transactions across 5 countries and 5 product categories.
- Built a 5-stage Python ETL pipeline in Jupyter to clean and engineer 33 columns from raw data, removing 7,548 duplicates and resolving all missing values.
- Engineered business KPIs including Total Revenue (\$401.6M), AOV (\$1,369), Satisfaction Rate (49.1%), and High-Value Transaction % (25%), enabling strategic revenue and operational benchmarking.
- Ran 11 statistical hypothesis tests (Kruskal-Wallis, ANOVA, Chi-square, Pearson/Spearman correlations) to validate business hypotheses.
- Designed and delivered 3 interactive Tableau dashboards (Sales Performance, Customer Behavior, Operations & Satisfaction) used by team to present 4 quantified business recommendations with a combined \$74–77M revenue uplift estimate.

EDUCATION

Bachelor of Technology — Data Science

Newton School of Technology, Rishihood University

2024 – 2028

CGPA: 8.216 / 10.0

Intermediate (Class XII)

National Institute of Open School

2023 – 2024

72.2%

Matriculation (Class X)

Kendriya Vidyalaya BSF Dantiwada

2019 – 2021

88.6%

ACHIEVEMENTS & EXTRA-CURRICULAR

- Knight @ LeetCode:** Competitive programming ranking reflecting strong problem-solving and algorithmic thinking skills applicable to data analytics.
- Pupil @ Codeforces:** Active competitive programmer with consistent participation in algorithmic contests.
- Mentorship:** Active member of Competitive Programming Club; mentored 100+ students in problem-solving techniques and coding fundamentals.
- Athletics:** Represented school in 100m sprint events at inter-school competitions.
- Football:** Played as part of school team at cluster-level competitions.
