

Rishik Chowdary Karuturi

New Delhi, India | rishik.karuturi2024@nst.rishihood.edu.in | github.com/RISHIK92 | linkedin.com/in/rishik-karuturi

Summary

Data & Visualization Analyst specialising in Python analytics pipelines, statistical hypothesis testing, and interactive Tableau dashboards. Analysis Lead on a 302,010-row global retail capstone (**\$74–77M combined opportunity identified**); Dashboard Lead on a 7,773-transaction café sales capstone at Newton School of Technology.

Education

BTech, Computer Science & Artificial Intelligence
Newton School of Technology, Rishihood University

2024 – Present
New Delhi, India

Technical Skills

Languages & Libraries: Python, Pandas, NumPy, SciPy, Matplotlib, Seaborn, Plotly, SQL
Visualisation & Reporting: Tableau Public, Google Sheets (Pivots, Slicers), Power BI, Jupyter
Analytics Methods: ETL Pipelines, EDA, Feature Engineering, Hypothesis Testing (Pearson, Spearman, Welch’s t, Kruskal-Wallis, ANOVA, Chi-square), Effect Sizes (Cohen’s d, Cramér’s V), KPI Framework Design, Customer Segmentation, Time-Series Analysis
Tools: Git & GitHub, VS Code, Google Colab

Projects

Global Retail Analytics · *Analysis Lead* · *Section D, Team 10*
[\[code →\]](#)

Newton School of Technology · Apr 2026

Python · Pandas · SciPy · Matplotlib · Seaborn · Tableau Public · Jupyter

- Built a **4-stage ETL pipeline** on 302,010 transactions (5 countries); cleaned to 293,468 rows with 8 engineered features via deduplication, type correction, and algebraic imputation.
- Executed **11 hypothesis tests** ($\alpha = 0.05$, $n = 293,468$) reporting effect sizes (Cohen’s d, Cramér’s V); confirmed revenue differentiation is driven entirely by *volume*, not pricing or segmentation.
- Delivered **3 Tableau dashboards** and identified a **\$74–77M/18-month opportunity**: +\$54.8M AU/CA acquisition, +\$19.5M pending-order recovery (16.14% of orders, \$64.9M at risk), +\$208K Electronics+Same-Day bundle.

Newton School of Technology · 2025–2026

Google Sheets · Pivot Tables · Slicers · KPI Framework

- Cleaned and transformed **7,773 transactions** across 12 months in Google Sheets; standardised 3-category location field and created month-number sort for correct chronological ordering.
- Designed a **5-metric KPI framework** (Revenue \$69,459, AOV \$8.94, Total Qty, Avg Items/Transaction) and produced **8 pivot analyses** across product, channel, and payment dimensions.
- Built an **interactive 4-slicer dashboard**; surfaced **39.78% missing Location** and **31.12% missing Payment** records as the primary operational gap, recommending mandatory POS validation to recover 25–30% decision accuracy.
